mylesenriquez.dev · github.com/enriquezm

Full stack engineer focused on design and frontend, with seven years at Slickdeals shipping UI to millions of shoppers. I build design systems and Vue and Nuxt interfaces, I'm comfortable in any component-based framework, and I'm just as comfortable owning the PHP and Node services, CMS, analytics and infrastructure behind them.

SKILLS

Frontend	Vue, Nuxt, TypeScript, JavaScript, SCSS, Tailwind, Storybook
Design	Figma, design tokens, design systems, prototyping, accessibility
Backend	PHP, Twig, Node.js, GraphQL, CMS and admin tooling
Infrastructure	AWS, Helm, Sentry, alarms and monitoring
Experiments	A/B testing, LaunchDarkly feature flags, Heap and Hotjar analytics

EXPERIENCE

Senior Full Stack Engineer · Slickdeals — 2024 — Present

- **Search on Nuxt:** built the new search page end to end, from the query and data layer to filters, sorting, pagination, the Price Intelligence widget and ad placements.
- **CMS modular pages:** built them end to end, from the controller, feed interface and CMS feed types to the page blocks and CMS image uploads.
- **Homefeed:** built the feed UI (tab bar, sticky feed bar, an in-house pill carousel that replaced a third-party library) and dynamic feed routes on web-api, plus a LaunchDarkly-gated opt-in flow with Heap tracking.
- **Giveaways (Daily Draw):** launched it with admin tooling, then Phase 2 with carousels, past winners and email reminders.
- **Auth:** built an A/B-tested login and registration flow with magic links, email verification and password reset, then the Unified Auth Form and behavior-driven sign-up nudges.
- **Experimentation:** built a frontpage experiment framework with holdout groups, then ran tests for the standardized deal card, personalized deals, Comment Summaries, Fire Deals, Deal Spotlight and ads.
- **Design system and community:** added a semantic color layer to the design tokens, and built real-time deal-score voting and the community voting bar.
- **Platform:** analytics schema and instrumentation, infrastructure alarms, Sentry cleanup, share-link shortening, sitemap canonical fixes and internal admin tools.
- Authored about 530 pull requests and reviewed about 820 since code review moved to GitHub in 2024.

Frontend Engineer · Slickdeals — 2019 — 2024

- **Blueprint design system:** core contributor (2,000+ file changes). Built patterns like the CSS grid deal card and animated hero banner, and rolled them out to category, store and landing pages.
- **vuerango component library:** built Vue components with Storybook stories, fixtures and tests (about 330 commits), including the login password step, skeleton loaders and deal card slots.
- **Loyalty and Cashback:** led the front end and worked across its PHP controllers and services: the cashback page and activator, outclick registry, rewards panel, redemption portal and onboarding.
- **SMS deal alerts:** added the SMS notification type, phone-number checks, a deal alerts management page and a marketing modal for users who aren't subscribed.
- **Browser extension:** shipped the site side of extension features, including install states, adblock detection and links to the extension web store.
- **Legacy modernization:** migrated legacy templates to Twig (1,000+ files) and built store pages, coupon tiles, the coupon submission workflow, deal page widgets and comment reactions with emoji animation.

Web Specialist · UNLV — 2017 — 2019

EDUCATION

B.A. Computer & Information Sciences · University of Hawai‘i at Mānoa — 2015
